User IT Security Awareness Training

SECURITY BEGINS AND ENDS WITH YOUR EMPLOYEES

Information Security is the Preservation of the Confidentiality, Integrity and Availability of Information.

Your employees are the best defense against many of the security threats facing your company. The black hat community relies on ignorance and rote behavior to power their illegal activities.

New technologies like mobile, web 2.0 and cloud computing are increasing security risks.

WHY AWARENESS IS NEEDED*

- 11% of Computers Worldwide are part of an existing botnet
- 23% of home computers are infected with malware
- 72% of corporate networks with 100+ computers are infected
- 28% of security incidents were from stolen hardware
- 25 million new strains of malware were created in 2009

YOUR COMPANY DATA IS AT RISK

User activity represents the highest level of risk in most organizations. Security appliances alone are insufficient to protect data. Today's connected companies need a comprehensive security plan that include user awareness training.

WHY LIVE TRAINING WORKS

REAL LIFE EXAMPLES

People are tired of nebulous warnings of security breaches occurring to unrelated companies. The curriculum includes real life examples of security breaches that impact everyday users.

TAILORED TRAINING

Training materials are modified for your corporate environment. Employees learn information quicker if the data is relevant to their work environment.

INTERACTIVE ACTIVITIES

Adults learn best when they interact with the information being presented. Learning activities are tailored to maximize the learning objectives.

THE CURRICULUM

SECURITY 101

Introduction to information security.
Information Classification and Management.
Review of current threats.

HOW TO WORK SECURELY

Using passwords.
Recognizing email attacks.
Social web site data leaks.
Safe surfing

PREVENTION

Physical & mobile security.
Avoiding malware.
Wireless security.
